INTRODUCTION

On behalf of the City of Bristol, Virginia (City), SCS Engineers has prepared this report to the Virginia Department of Environmental Quality (VDEQ) in accordance with item 8.iii in Appendix A of the Consent Decree between the City and VDEQ. This report covers the Solid Waste Permit #588 landfill during the month of January.

1.0 GAS COLLECTION

The City has continued steps to operate, develop, and improve the facility's landfill gas collection and control system (GCCS). The following sections describe steps City is taking in collaboration with its consultants and operations and monitoring contractor.

1.1 SURFACE AND LEACHATE COLLECTION EMISSIONS

1.1.1 Surface Emissions

1.1.1.1 Monitoring

In addition to standard regulatory quarterly surface emissions monitoring, SCS performed additional surface emissions monitoring on January 5, 2023, January 11, 2023, January 19, 2023, January 26, 2023 and January 30, 2023. These Weekly Surface Emissions Monitoring (SEM) Events were performed in accordance with Section 3.5 of the Plan of Action in Response to the Expert Panel Report, submitted to VDEQ on July 6, 2022.

The monitoring in December generally conforms to the requirements of 40 CFR 63.1960(c) and (d), and 40 CFR 60.36f(c) and (d), and 40 CFR 60, Appendix A, Method 21. The landfill gas (LFG) collection system is required to operate such that the methane concentration is less than 500 ppm above background at the landfill surface.

The monitoring route included the entire waste footprint of the Permit No. 588 landfill. Sampling was conducted with a Thermo Scientific TVA-2020 Flame Ionization Detector (FID) at 30-meter intervals and where visual observations indicated the potential for elevated concentrations of LFG, such as distressed vegetation and surface cover cracks. In addition, in accordance with 40 CFR 63.1958(d)(ii)(2) and 40 CFR 60.34f(d), monitoring was conducted at all surface cover penetrations within the waste footprint outside of the active filling area.

SCS submitted letters to VDEQ outlining the results on January 5, 2023, January 11, 2023, January 19, 2023, January 26, 2023, and January 30, 2023. Copies of those submittals are included in Appendix A. Table 1 summarizes the results of the three monitoring events in December.

Table 1. Summary of December Surface Emissions Monitoring

Description	January 5, 2023	January 11, 2023	January 19, 2023	January 26, 2023	January 30, 2023
Number of Points Sampled	149	149	149	149	149
Number of Points in Serpentine Route	100	100	100	100	100
Number of Points at Surface Cover Penetrations	49	49	49	49	49

Description	January 5, 2023	January 11, 2023	January 19, 2023	January 26, 2023	January 30, 2023
Number of Exceedances[1]	0	0	0	1	0
Number of Serpentine Exceedances	0	0	0	0	0
Number of Pipe Penetration Exceedances	0	0	0	1	0

Only one exceedance was found over the course of the month of January.

1.1.2 Leachate Collection Emissions

SCS Field Services (SCS-FS) visited the Bristol Landfill on January 5, 2023 and January 6, 2023 and performed monitoring of the leachate, witness zone, and gradient control clean-outs at the northern and southern ends of the landfill. The results of that monitoring are included in SCS-FS' summary report for the month of January dated February 7, 2023 A copy of this report is included in Appendix B. The monitoring data for the clean-outs at the southern end of the landfill are listed as LC01 – LC10. The monitoring data for the clean-outs at the northern end of the landfill are listed as NC01 – NC10. Based on site records and correspondence, SCS prepared a summary of the pipe numbering relative to the function of the pipes shown in Table 2.

Table 2. Cleanout Pipe Identification

Northern Cleanouts		Southern Cleanouts	
ID #	Description	ID #	Description
NC01	Leachate East	LC01	Gradient West
NC02	Leachate Center	LC02	Gradient East
NC03	Leachate West	LC03	Leachate Center
NC04	Witness East	LC04	Witness East
NC05	Witness Center	LC05	Leachate West
NC06	Witness West	LC06	Gradient Center West
NC07	Gradient East	LC07	Leachate East
NC08	Gradient Center East	LC08	Gradient Center East
NC09	Gradient Center West	LC09	Leachate West
NC10	Gradient West	LC10	Witness Center

1.2 EXISTING GAS EXTRACTION SYSTEM PERFORMANCE

SCS and SCS-FS have been coordinating with the City to improve the performance of the existing gas system. Specific actions taken to maintain and improve the system are detailed in SCS-FS' summary report for the month of January.

[2] Sensor could not be lowered below 60 feet

1.3 REMOTE MONITORING SYSTEM

SCS Remote Monitoring & Control (SCS-RMC) had previously furnished 25 industrial internet of things (IIoT) temperature sensors for installation on landfill gas wells at the Bristol Landfill, VA. The sensors are capable of recording and transmitting gas temperatures and GPS locations. The sensors will upload data collected via a cellular connection to a database managed by SCS-RMC.

- As outlined in the November Monthly Compliance Report for the SWP #588 Landfill the system is currently undergoing commissioning. Following a review of precision of the automated well-head temperature sensors, SCS replaced the existing wellhead temperature sensors on Well #51 and Well #68. The sensors had a longer temperature probe (2 inches long) and were replaced on January 6, 2023. SCS has reviewed the data from these sensors and noted improved precision.

- On January 5, 2023, SCS used field instrumentation to measure the temperature at Well 51 and Well 68.

  - The field instrumentation at Well 51 indicated a temperature of 130°F. The automated temperature sensor during the same general timeframe indicated a temperature of 127°F.
  - The field instrumentation Well 68 indicated a temperature of 129°F. The automated temperature sensor during the same general timeframe indicated a temperature of 128°F.

- SCS believes the larger range of temperatures recorded by the two different methods at Well 51 is due in part to lower gas flows at that location.

- The results of the comparison of temperatures measured using the two methods indicates that the precision of the 2-inch remote sensors is accurate. Based on these results, SCS has ordered additional sensors with 2 inch long probes to replace the sensors on the other wellheads. These sensors are expected to be delivered and installed during the week of February 20, 2023.

Despite the system still being subject to ongoing commissioning, the City began sharing data with VDEQ on a daily basis per the Department's request. This reporting began with the November 30, 2022 data which was submitted on December 1, 2022. Daily averages for each wellhead are reported to the Department the following day. A report with the daily temperature data is included as Appendix C.

The sensor on Well 68 was damaged and did not report temperatures from January 1, 2023 to January 4, 2023. A replacement sensor was installed on January 5, 2023. After installation, some updates to the software for the instrumentation were required, which resulted in inaccurate temperature readings on that day. The system is still in the commissioning phase, and caution should be used when making any interpretations based on the data in this report.

1.4 LARGE-DIAMETER DUAL-PHASE EXTRACTION WELLS

SCS completed design work on an expansion of the existing GCCS during the month of December. The proposed expansion includes at least 5 large diameter dual-phase extraction wells. SCS will submitted the design to VDEQ prior to December 31, 2022. The City has commenced solicitation of

contractor's bids for this project by advertising for bids on December 12, 2022 and conducting the Pre-bid Meeting on December 16, 2022. The contractor's bids were due to the City on January 12, 2023. The City received one bid for the project from SCS Field Services Construction (SCS-CONS). On January 26, 2023 the City awarded the project to SCS-CONS.

Upon establishing the proposed schedule for executing the field construction activities, which will be negotiated between the City and the selected Contractor, the City will inform VDEQ of the anticipated milestone dates. In accordance with typical protocols, the Construction Certification Report documenting the CQA activities related to construction of this subsequent phase of the project will be submitted to VDEQ upon completion.

1.5 VDEQ CONCURRENCE ON WELLS

The City has engaged with VDEQ in discussions about the proposed approach for landfill GCCS improvements and expansions. On October 27, 2022 SCS provided VDEQ with an overview of the proposed GCCS expansion design outlined in Section 1.4. SCS submitted the design of the landfill GCCS expansion to VDEQ on December 31, 2022. The City and SCS intend to continue engaging with the Department throughout the design and installation process. The City intends to delay installation of temporary or final cover systems until the City and VDEQ agree that the GCCS is sufficient.

2.0 SIDEWALL ODOR MITIGATION

The City has initiated design and construction work to address fugitive emissions emanating from the quarry sidewalls. Specific aspects of the proposed design features are outlined in the following sections.

2.1 PERIMETER GAS COLLECTION SYSTEM

SCS' design of the GCCS expansion outlined in Section 1.5 includes perimeter LFG wells. These wells will be placed closer to the sidewall to intercept landfill gas that potentially could migrate to the quarry wall. These wells will supplement the sidewall odor mitigation system described in section 2.2. SCS submitted the design to VDEQ which includes these wells on December 31, 2022. The City has commenced solicitation of contractor's bids for this project by advertising for bids on December 12, 2022 and conducting the Pre-bid Meeting on December 16, 2022. The contractor's bids were due to the City on January 12, 2023. The City received one bid for the project from SCS Field Services Construction (SCS-CONS). On January 26, 2023 the City awarded the project to SCS-CONS.

Upon establishing the proposed schedule for executing the field construction activities, which will be negotiated between the City and the selected Contractor, the City will inform VDEQ of the anticipated milestone dates. In accordance with typical protocols, the Construction Certification Report documenting the CQA activities related to construction of this subsequent phase of the project will be submitted to VDEQ upon completion. A copy of the bid package is included in Appendix D.

2.2 SIDEWALL ODOR MITIGATION SYSTEM

On behalf of the City and in an effort to capture emissions from the quarry sidewall, SCS designed a sidewall odor mitigation system during the month of October. On October 20, 2022 SCS provided an overview of the proposed system to VDEQ staff. The design of this system was prepared and submitted to VDEQ on November 1st. A project manual detailing the system specifications of the system was developed concurrently with the design of the system.

2.3 PILOT SYSTEM CONSTRUCTION

SCS-CONS continued construction of Phase 1 of the sidewall odor mitigation system. The low permeability soil layer was placed during the first week of January. Inclement weather limited low permeability soil placement. SCS-CONS was able to make progress on low permeable soil placement by importing dry material and utilizing tarps to protect material after placement. Low permeable soil placement is shown in Figure 1.

Shotcrete was applied to the wall between January 6, 2023 and January 11, 2023. After shotcrete was applied, SCS-CONS began installation of the external odor mitigation horizontal collector (upper collector). Additional low permeability soil was placed adjacent to and on top of the upper collector.

SCS-CONS connected the two horizontal collector to the 2 HP Rotron blower and LSC CF-10 solar powered flare. On January 31, 2023 construction of Phase 1 was substantially complete and SCS was able begin extracting gas using the Rotron blower. The flare was lit briefly and SCS was able to take gas readings at the blower inlet. Methane readings at the blower inlet ranged from 32% to 40% CH_4. SCS will continue testing the pilot system as the final layers of low permeable soil are placed.

Figure 1. Sidewall Odor Mitigation System Construction

2.4 FULL SYSTEM CONSTRUCTION

SCS-CONS began construction of the Phase 2 perimeter landfill gas horizontal collector (lower collector) during the month of January. SCS-CONS constructed the lower collector at times when inclement weather limited construction of Phase 1 of the system.

3.0 WASTE TEMPERATURE MONITORING

On behalf of the City, SCS designed a temperature monitoring system to collect temperature data throughout the waste mass. The steps taken by the City to implement this system are described in the following sections.

3.1 TEMPERATURE MONITORING SYSTEM DESIGN

The temperature monitoring system consists of 9 boreholes drilled into the waste mass. A steel casing will be placed in each borehole and the hole will be backfilled around the casing with aggregate. A series of temperature sensors will be placed inside the steel casing. At the top of each borehole, an industrial internet of things (IIoT) transmitter will collect the data from the sensors and transmit it to a cloud-based RMC system. The City submitted design of the temperature monitoring system to VDEQ on November 30, 2022.

3.2 TEMPERATURE MONITORING SYSTEM INSTALLATION

The in-situ Landfill Temperature Monitoring System Project encountered significant challenges during the month of January. Shortly after installation of the temperature measurement instrumentation (which occurred in late December), 7 of the 9 sensors installed stopped functioning. SCS-RMC mobilized to the site on January 11, 2023 to troubleshoot the non-functional temperature sensors. Part of the troubleshooting process involved placing another temperature sensor in the steel casings and measuring temperatures at various depths. The results of those measurements conducted on January 11, 2023 and January 12, 2023 are shown in Table 3

Table 3. Temperatures Measured within Temperature Monitoring System Casings on January 11, 2023 and January 12, 2023 (°F)

Depth (ft)	TP-1	TP-2	TP-3	TP-4	TP-5	TP-6	TP-7
20	234	146	210	129	120	210	203
40	235	190	212	207	130	215	213
60	232	210	244	207	147	215	226
80	229	235	246	206	210	-[2]	232
100	228	253	238	207	210	-	235
120	222	266	238	203	201	-	240
140	267	247	230	210	226	-	240
160	292	-[3]	228	226	266	-	240
180	-[4]	-	223	260	267	-	243
200	-	-	217	214	255	-	226

In many cases temperatures recorded within the casing exceeded the temperatures expected based on temperatures of the waste core tailings recorded during drilling of the in-situ Landfill Temperature Monitoring System or the temperatures measured at landfill gas collection wellheads during the past 18 months. Some temperatures exceeded the operating range of the temperature sensors that were installed into the probe casings in late December. SCS believes that the high temperatures and/or exposure to certain constituents in the subsurface fluids (liquids and/or gases) are the most likely cause of the failure of the temperature sensors.

[2] Sensor could not be lowered below 60 feet
[3] Casing does not extend below 160 feet.
[4] Casing does not extend below 180 feet.

On January 24, 2023 and January 25, 2023, SCS-RMC mobilized to the site again to take additional temperature measurements within the steel probe casings. In some cases liquids (or an actual physical obstruction at TP-6) within the casing limited the depths at which measurements could be taken. Temperature measurements taken during the second mobilization are summarized in Table 4.

Table 4. Temperatures Measured within Temperature Monitoring System Casings on January 24, 2023 and January 25, 2023 (°F)

Depth (ft)	TP-1	TP-2	TP-3	TP-4	TP-5	TP-6	TP-7
20	204	78	105	140	154	-[5]	211
40	251	80	124	-[6]	-[7]	-	215
60	240	120	189	-	-	-	224
80	275	180	260	-	-	-	232
100	293	281	291	-	-	-	232
120	303	300	304	-	-	-	-[8]
140	293	-[9]	-[10]	-	-	-	-
160	330	-	-	-	-	-	-

SCS-RMC has identified an alternative temperature sensor to be placed in the casing that has a higher operating range and is expected to withstand the temperatures measured in the waste, as well as chemical compatibility issues. The replacement sensors have been ordered and are expected to be installed during the month of February. Installation of the replacement sensors will require minor modifications to the configuration of the probe cap fitting and connections at the probe terminus of the in-situ Landfill Temperature Monitoring System.

Two of the temperature probes (TP-8 and TP-9) reported temperatures using the originally installed instrumentation. The daily average temperatures recorded in those probes are shown in Table 5 and Table 6. The temperature instrumentation within both of these probes will be replaced along with the rest of the probes to maintain consistency of equipment.

Table 5. Temperatures Measure within Temperature Probe 8 from January 16, 2023 until January 31, 2023 (°F)

Depth (ft)	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31

4.0 LEACHATE EXTRACTION AND MONITORING

The City has begun taking steps to improve the extraction of leachate from the waste mass and collect analytical data about the leachate. The following sections detail steps taken to achieve these goals.

4.1 EXISTING SYSTEM OPTIMIZATION

During mobilizations to conduct surface emissions monitoring outlined in Section 1.1.1, SCS also collected stroke counter data from the pumps installed in the GCCS wells. Stroke counts were collected from 18 wells on January 5, 2023; January 11, 2023; January 19, 2023; January 26, 2023; and January 30, 2023. The data collected is summarized in Table 7.

Table 7. Summary of Dual Extraction Well Pump Stroke Counter Data

Well	January 5, 2023	January 11, 2023	January 19, 2023	January 26, 2023	January 30, 2023

EW65	3572	3572	3802	3871	3871
EW63[11]	---	---	---	---	---
EW62	113988	113988	113992	113992	113992
EW53	1849469	1852531	1852535	1852553	1852553

Based on this data and stroke counts taken on December 27, 2022, SCS can estimate the number of gallons of liquid pumped from each well. SCS assumed that each stroke correlates to approximately 0.3 gallons of liquid removed from the well. This data will then be used to repair or replace pumps or replace nonfunctional stroke counters. Estimates of the quantities of liquids removed between the reading dates is shown in Table 8 below.

Table 8. Summary of Dual Extraction Well Pump Liquids Removal

SCS estimates that approximately 123,000 gallons of liquids were removed from the landfill gas collection and control system during the month of January. The City and SCS understand that operations of dewatering pumps are critical to address issues related to heat, odors, and the efficient operation of the GCCS. The landfill conditions present a challenging environment for pump operations. Pumps require servicing after relatively short intervals.

During the construction of the LFGCCS expansion outlined in Sections 1.4 and 2.1 multiple types of leachate extraction pumps will be installed. After installation, the City and SCS will evaluate the performance of those pumps. Based on that evaluation, the City will select the pump type that is most effective give the landfill conditions.

4.2 SAMPLING AND ANALYSIS PLAN

On November 1, 2022, SCS submitted to VDEQ the Dual Phase Landfill Gas Extraction Well Leachate Monitoring Plan for the Bristol Integrated Solid Waste Management Facility Solid Waste Permit #588 Landfill. The Plan documents procedures and instructions necessary to implement a leachate monitoring program for the Dual Phase Landfill Gas Extraction Wells (LFG-EWs) installed within the Permit #588 Landfill. The Plan was prepared in response to the Expert Panel Report prepared by the

[12] Subsequent investigation indicated that the pump in EW 52 is working but strokes are not being recorded.
[13] Subsequent investigation indicated that the pump in EW 58 is working but strokes are not being recorded.

Expert Panel convened by the Virginia Department of Environmental Quality to address odor problems and operational concerns at the Facility.

On December 1, 2022, SCS submitted to VDEQ the revised Plan addressing comments provided by VDEQ in an email dated November 28, 2022 regarding laboratory analytical methods. The revised Plan included modified sections addressing extraction well and pump maintenance and sample collection procedures.

4.3 SAMPLING AND ANALYSIS

4.3.1 Sample Collection

On January 17 and 18, 2023, SCS collected leachate samples from seven Dual Phase LFG-EWs (EW-50, EW-58, EW-59, and EW-65). Pumps were not running at the time of sample collection in the following wells: EW-49, EW-51, EW-53, EW-54, EW-55, EW-58, EW-61, EW-62, EW-64, and EW-65. There was no pump in EW-56 and EW-63 at the time of sample collection. At the time of sample collection dissolved oxygen, oxidation-reduction potential, pH, specific conductance, temperature, and turbidity were measured and recorded. The sample collection log is included in Appendix F.

The samples were delivered to Enthalpy Analytical (Enthalpy) in Richmond, Virginia and Weck in City of Industry, California for analysis. The Enthalpy's Virginia Division of Consolidated Laboratory Services (VELAP) certifications are provided on the certificate of analysis (COA) included in Appendix F. The samples were analyzed for the parameters utilizing the analytical methods outlined in the Dual Phase Landfill Gas Extraction Well Leachate Monitoring Plan.

The samples sent to Weck were only analyzed for volatile fatty acids (VFAs). Due a heavy backlog, the VFA results were not available at the time of this report submission. The January 2023 VFA results will be provided in the February 2023 Monthly Compliance Report. In addition, there continues to be a delay in the issuance of the lab report for a majority of the December 2022 VFA analyses. VFA results were issued for the December 2022 sampling of EW-50. The final COA for this analysis is included in Appendix F. The COA also includes the VELAP certification information for Pace Analytical.

4.3.2 Quality Assurance and Quality Control

Field quality control (QC) involved the collection and analysis of trip blanks to verify that the sample collection and handling processes did not impair the quality of the samples. Trip blanks were prepared for volatile organic compound (VOC) analysis via Solid Waste (SW)-846 Method 8260D. In conjunction with the preparation of the groundwater sample collection bottle set, laboratory personnel filled each trip blank sample bottle with distilled/deionized water and transported them with the empty bottle kits to SCS. Field personnel handled the trip blanks like a sample; they remained un-opened, were transported in the sample cooler, and were returned to the laboratory for analyses. A trip blank is used to indicate potential contamination due to the potential migration of VOCs from the air at the site or in the sample shipping containers, through the septum or around the lid of the sampling vials and into the sample.

Laboratory quality assurance/quality control (QA/QC) involves the routine collection and analysis of method reagent blanks, matrix spike (MS) and matrix spike duplicate (MSD) samples, and laboratory control samples (LCS). A brief summary of each of these is presented below:

- Method Blank – The method blank is deionized water subjected to the same reagents and manipulations to which site samples are subjected. Positive results in the method

blanks may indicate either contamination of the chemical reagents or the glassware and implements used to store or prepare the sample and resulting solutions.

- **MS/MSD** – A MS is an aliquot of a field sample with a known concentration of target parameter added to it. A MSD is an intra-laboratory split sample spiked with a known concentration of target parameter. Spiking for each occurs prior to sample analysis. MS/MSD samples are collected for every batch of twenty or fewer samples. Matrix spike recoveries are used to indicate what effect the sample matrix may have on the reported concentration and/or the performance of the sample preparation and analysis.

- **LCS** – These samples consist of distilled/deionized water injected with the parameters of interest for single parameter methods and selected parameters for multi-parameter methods according to the appropriate analytical method. LCS samples are prepared and analyzed for each batch containing twenty or fewer samples. LCS recoveries are used to monitor analytical accuracy.

Surrogate recoveries are also measured as a part of laboratory QA/QC. Surrogates are organic compounds that are similar to the parameters of interest in chemical composition, extraction, and chromatography, but are not normally found in environmental samples. These compounds are inserted into blank, standards, samples, and spiked samples prior to analysis for organic parameters only. Percent recoveries are calculated for each surrogate. Spike recoveries at or below acceptance criteria indicate whether analytical results can be considered biased high or biased low.

Field and laboratory QA/QC also involves the routine collection and analysis of duplicate field samples. These samples are collected at a rate of one per sample event. A duplicate is a separate sample collected independently in such a manner that it equally represents the medium at a given time and location. Co-located samples provide intra-laboratory precision information for the entire measurement system, including sample collection, homogeneity, handling, shipping, storage, preparation, and analysis.

No trip or method blank detects were identified for the January 2023 monitoring event. The laboratory analysis report for the January 2023 monitoring event trip blank is included in **Appendix F**. The January 2023 monitoring event laboratory QA/QC reports, including the method blank results, are included in the COAs in **Appendix F**.

4.3.3 Data Validation

To identify analytical data that may not represent valid results, data from the monitoring events were validated by the Laboratory and SCS in accordance with United States Environmental Protection Agency (EPA) guidance[14]. Data flagged with a "J" qualifier indicates the quantitation of the parameter is less than the laboratory's limit of quantitation but greater than the laboratory's limit of detection (LOD); thus, the concentration is considered estimated. Samples with parameter detections less than five times that of the trip blank, field blank, and/or method blank detection but greater than the laboratory's LOD are flagged with a "B" qualifier. Samples with common laboratory contaminant

[14] United States Environmental Protection Agency. Guidance for Data Usability in Risk Assessment (Part A-14). April 1992.
United States Environmental Protection Agency. Office of Superfund Remediation and Technology Innovation. National Functional Guidelines for Inorganic Superfund Methods Data Review. January 2017.
United States Environmental Protection Agency. Office of Superfund Remediation and Technology Innovation. National Functional Guidelines for Organic Superfund Methods Data Review. January 2017.

parameter detections less than 10 times that of the trip blank, field blank, and/or method/laboratory blank detection but greater than the laboratory's LOD are flagged with a "B" qualifier. Data with a "B" qualifier are considered not validated as the detection may be anomalous due to cross-contamination during sampling, transportation of samples, or laboratory analysis. No leachate results were flagged with a "B" qualifier for the December 2022 monitoring event as no constituents were detected in the December 2022 trip and method blanks.

4.3.4 Laboratory Analytical Results

Parameter results for the January 2023 monitoring event are presented on **Table 9**. The associated COA is included in **Appendix F**. Parameter results from the January 2023 and previous monitoring event (November and December 2022) are presented on a table in **Appendix F**. As previously stated, the January 2023 VFA results were not available at the time of this report submission. The January 2023 VFA results will be provided in the February 2023 Monthly Compliance Report. In addition, there continues to be a delay in the issuance of the lab report for a majority of the December 2022 VFA analyses. VFA results were issued for the December 2022 sampling of EW-50 and the results are presented on the table in **Appendix F**. The final COA for December 2022 EW-50 VFA analysis is included in **Appendix F.**

LOD = laboratory's Limit of Detection
LOQ = laboratory's Limit of Quantitation
mg/L = milligrams per liter
ND = Not Detected
ug/L = micrograms per liter

4.3.5 Monitoring Data Evaluation and Interpretation

As an ETLF, the characteristics of leachate from the SWP588 Landfill are anticipated to be different than that of leachate from a typical sanitary landfill. Table 10 provides a comparison of the January 2023 concentrations detected in the leachate from the LFG-EWs to concentrations commonly detected in new landfills[15] (less than two years old) for select parameters and concentrations detected in other ETLFs. The below table also provides data for leachate samples collected from the SWP588 Landfill's leachate collection system in July and November 2022. As shown on the below table, the constituent concentrations detected in the liquids from the LFG-EWs are similar to the detected concentrations in leachate from other ETLFs. These high concentrations are the products of endothermic pyrolysis of the waste in an ETLF.

[15] Tchobanoglous, George, Hilary Theisen, and Samuel Vigil. Integrated Solid Waste Management Engineering Principles and Management Issues. McGraw-Hill, Inc. New York. 1993.

Table 10. Leachate Composition Comparison

Parameter	SWP588 Dual Phase LFG-EWs Leachate	Typical New Sanitary Landfill Leachate	Other ETLFs	SWP588 Leachate Collection System
Ammonia as N (mg/L)	1330 - 2440	10 - 800	n/a	406
Biological Oxygen Demand (mg/L)	999 - 28100	2000 – 30000	728 - 65000	2170
Chemical Oxygen Demand (mg/L)	3630 - 47600	3000 – 60000	8400 - 79000	1760
Nitrate as N (mg/L)	ND (<0.35) - 3.9	n/a	4.64 - 10.5	n/a
pH (s.u.)	6.17 – 8.18	4.5 - 7.5	6.4 - 9.6	7.61 - 8.03
Total Kjeldahl Nitrogen (mg/L)	881 - 2970	n/a	3280 - 4860	455
TOTAL METALS (mg/L)				
Arsenic	0.225 - 0.846	n/a	0.1 - 0.98	0.156 - 0.267
Barium	0.554 - 1.92	n/a	0.18 - 1.29	0.944
Chromium	0.155 - 0.488	n/a	0.74 - 1.28	0.0779 - 0.0973
Copper	ND (<0.008) - 0.0256	n/a	ND (<0.05) - 0.07	0.0236
Nickel	0.0407 - 0.1442	n/a	0.07 - 0.37	0.0194
Zinc	0.074 - 0.15	n/a	0.41 - 12.9	n/a
VOLATILE ORGANIC COMPOUNDS (ug/L)				
2-Butanone (MEK)	632 - 7840	n/a	200 - 20700	n/a
Acetone	1530 - 22200	n/a	200 - 45400	n/a
Benzene	28.7 - 1620	n/a	10.4 - 64.4	304 - 1530
Ethylbenzene	20.8 - 93.9	n/a	2.0 - 14	85.2 - 183
Toluene	35.3 - 139	n/a	8 - 40.5	32.4 - 87.4

s.u. = standard units
ug/L = micrograms per liter

5.0 SETTLEMENT MONITORING AND MANAGEMENT

The City is taking steps to track and manage settlement occurring in the landfill. A summary of actions taken to quantify and manage settlement is included in the sections below.

5.1 SETTLEMENT MONITORING AND MANAGEMENT PLAN

On behalf of the City, SCS prepared a settlement monitoring and management plan. The plan provides for means and methods for monitoring surface elevations across the surface of the landfill, prior to, and after placement of the EVOH cover system. The settlement monitoring and management plan includes procedures for placement of settlement monitoring before and after the placement of the EVOH cover.

Settlement monitoring outlined in the plan includes two components:

- Installation and monitoring of settlement plates installed within the waste mass
- Monthly surveys of the landfill topography

The plan also addresses data collection procedures, settlement analysis, settlement plate design, and reporting procedures. The plan was submitted to VDEQ on November 15, 2022.

5.2 MONTHLY SURVEYS

5.2.1 Topographic Data Collection

The City, through SCS, collected topographic data of the Solid Waste Permit #588 Landfill using photogrammetric methods via an unmanned aerial vehicle (UAV or drone). On January 10, 2023 the flight was completed and the topographic data collected. The topographic data collected is shown on Sheet 1 in Appendix E.

The topography within the landfill footprint was compared to topographic data collected by SCS using photogrammetric methods on December 2, 2022. A drawing depicting the December 2, 2022 topography is included as Sheet 2 in Appendix E.

Based on a comparison of the topographic data collected on those two dates, settlement occurred that reduced the volume of waste in the landfill by approximately 17,100 cubic yards. During that same time period approximately 1,000,800 cubic yards of fill were placed on the landfill. This fill was primarily soil placed as part of the sidewall odor mitigation system construction. This resulted in a net volume decrease of approximately 16,100 cubic yards.

The largest settlement occurred primarily in the southern end of the landfill where the waste settled by 1 foot or more in some areas. Settlement in the northern portion of the landfill was generally less substantial. Some areas around the edges of the waste exhibited an increase in elevation, likely due to sediment deposition during storm events. Increases in elevation along the western edge of the landfill and most likely due to installation of the Sidewall Odor Mitigation System. Soil stockpile locations associated with the Sidewall Odor Mitigation System showed a larger negative elevation change due to material removal from the stockpiles. A visual depiction of settlement and filling at the landfill during this time is depicted on Sheet 3 in Appendix E.

SCS calculated the waste footprint for purposes of analysis to be 752,610 square feet. Based on that area and the net volume change, the average elevation change within the waste is approximately 0.6 feet.

SCS will collect topographic data covering the landfill surface again in February using photogrammetric methods via UAV. This data will be compared to the data collected in January.

5.2.2 Settlement Plate Surveys

On November 7, 2022 SCS field services installed 12 settlement plates on the Solid Waste Permit #588 landfill. The construction and installation of the settlement plates generally conforms to the design outline in the Settlement Monitoring and Management Plan. The tops of the PVC pipes were sprayed painted orange to improve visibility.

The locations of the settlement plates were surveyed by the City's surveyor on November 14, 2022. The settlement plates were surveyed again on December 13, 2022 and January 3, 2023. The settlement plate locations are depicted on Sheet 4 in Appendix E. The surveyed coordinates[16] and elevation changes of the settlement plates are shown in Table 11.

Table 11. Settlement Plate Locations

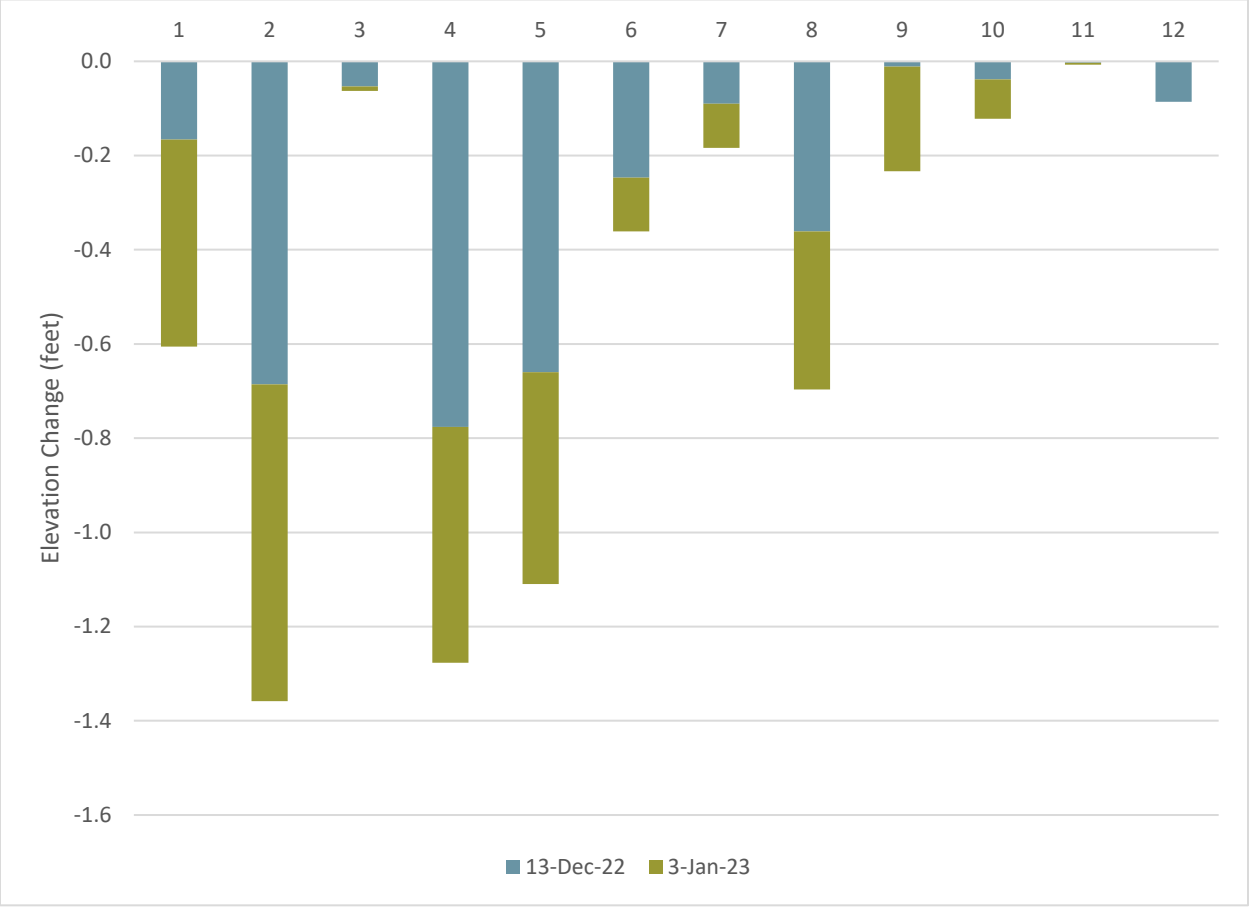
Settlement Plate	Northing	Easting	Elevation on January 3, 2023	Elevation Change Since December 13, 2022	Elevation Change Since Installation
SP-1	3,397,886.2	10,412,078.3	1,833.8	-0.4	-0.6
SP-2	3,397,806.4	10,412,364.4	1,809.2	-0.7	-1.4
SP-3	3,397,787.3	10,412,536.8	1,783.6	0.0	-0.1
SP-4	3,398,250.6	10,412,183.9	1,816.2	-0.5	-1.3
SP-5	3,398,256.4	10,412,338.8	1,799.7	-0.4	-1.1
SP-6	3,398,249.4	10,412,510.9	1,777.3	-0.1	-0.4
SP-7	3,398,737.8	10,412,157.3	1,828.4	-0.1	-0.2
SP-8	3,398,679.2	10,412,290.8	1,806.7	-0.3	-0.7
SP-9	3,398,673.4	10,412,400.8	1,785.6	-0.2	-0.2
SP-10	3,399,080.6	10,412,092.1	1,840.1	-0.1	-0.1
SP-11	3,399,216.3	10,412,183.7	1,816.3	0.0	0.0
SP-12	3,399,381.8	10,412,019.4	1,810.6	0.0	-0.1

Settlement Plates 1, 2, 4, 5, and 8 demonstrated substantial elevation change. These settlement plates are towards the center of the waste mass and in the southern end of the landfill. This area is where waste was most recently placed and is expected to show the most rapid settlement. This area is also the location of the gas wells exhibiting higher temperatures. Settlement Plate 8 exhibited less

[16] Settlement plate locations and coordinates are based on a local coordinate system.

of a change in elevation compared to the other three plates and is located further north than the other settlement plates. The elevation changes are also shown graphically in Figure 2.

Figure 2. Elevation Change of Settlement Plates



The rest of the settlement plates exhibited minimal settlement or values that are within the expected range for landfill settlement. The elevations changes of the settlement plates are generally consistent with elevation changes exhibited by a review of topographic data as outlined in Section 5.2.1.

The settlement plates will be surveyed again during the month of February. The elevations surveyed will be compared to the elevations surveyed the previous months.

6.0 INTERMEDIATE COVER AND EVOH COVER SYSTEM

The City is taking steps to provide intermediate and temporary cover of the wastes in the landfill. The sections below outline the steps taken by the City.

6.1 INTERMEDIATE COVER INSTALLATION

The City completed hauling and placement of a 12-inch thick intermediate cover across the entire landfill prior to October 10, 2022. The cover was placed in accordance with 9VAC20-81-140(B)(1)(d).

SCS coordinated with the City to dig a series of test holes to verify cover thickness in select locations. Details of these verifications

6.2 EVOH COVER SYSTEM DESIGN

SCS submited the Ethylene Vinyl Alcohol (EVOH) Geomembrane Deployment Plan and product specification to VDEQ on January 30, 2023. SCS has prepared the rawings (7 sheets) titled "Interim EVOH Cover System Preliminary Design Plans" dated January 30, 2023 which include the layout and details of the proposed EVOH deployment. Those drawings are included in Appendix D.

The design addressed the gas collection infrastructure, grading work to be completed prior to deployment, estimates of stormwater volumes, stormwater channel profile, material volumes, and construction materials to be used.

6.3 EVOH COVER SYSTEM PROCUREMENT

Drawings used for the purposes of bidding, procurement and construction of the EVOH cover system will generally conform to the layout and details in the drawings described in section 6.2. SCS also prepared and submitted to VDEQ a specification for the EVOH geomembrane on January 30, 2023 based upon industry standards and discussions with material manufacturers. This specification and drawing set represent the first steps in the procurement process. SCS and the City have coordinated with potential suppliers to specify a product that is not currently anticipated to have long lead times.

6.4 EVOH COVER SYSTEM INSTALLATION

Installation of the EVOH cover system will begin after the installation of other infrastructure is complete.

7.0 STORM WATER MANAGEMENT

As discussed in section 6.3, the EVOH deployment plan included some initial stormwater management details. These details will be further refined as the design process progresses during the month of February.

8.0 MISCELLANEOUS

8.1 CEASE WASTE ACCEPTANCE

The City ceased acceptance of offsite waste at the Solid Waste Permit #588 landfill prior to September 12, 2022.

8.2 LONG-TERM PLAN

SCS submitted the Monitoring, Maintenance, and Repair Plan to VDEQ for the SWP #588 landfill on December 30, 2022. The Plan documents procedures for monitoring, maintaining, and repair/upgrade for the landfill cover, leachate and gas collection system, sidewall odor mitigation system, and the stormwater management controls for the City of Bristol Integrated Solid Waste

Management Facility Solid Waste Permit #588 Landfill. The Plan is intended to be a "living" document to be revised as construction is completed and new information becomes available.

8.3 MONTHLY COMPLIANCE REPORTS

As outlined in the introduction this report is intended to provide comprehensive updates regarding progress towards completion of each item outlined in Appendix A of the Consent Decree between the City and VDEQ,

8.4 COMMUNITY OUTREACH PROGRAM

The City's consultant leading community outreach, McGuireWoods Consulting, outlined the actions taken as part of their community outreach efforts. For the month of January, those actions include:

- **January – ongoing basis:** Eight updates posted on the BristalVALandfill.org site and the existing City of Bristol Landfill Notifications and Information page covering several important updates including:
  - Progress updates during construction of the Sidewall Odor Mitigation System
  - Information related to the Motion for Mediation between Bristol, VA and Bristol, TN
  - Bristol, VA's request for contractor bids related to the Landfill Gas System expansion
  - Provided links to news articles discussing construction updates and information related to how Bristol, VA is funding current and future work at the landfill
  - Announcement of Bristol, VA entering a formal consent decree with the Virginia Office of the Attorney General and the Virginia Department of Environmental Quality.
- **January 6th:** Email communication sent to the list of members of the public signed up through the Bristol, VA website, the BristolVALandfill.org website, or at the November 1 Open House to receive information via email
  - Email provided a status update on the installation of the construction of the Sidewall Odor Mitigation System
  - Email announced the city was in the process of planning a second Open House, which will occur in February
  - Linked to a news article related to the U.S. District Court ordering the lawsuit to mediation, as well as to the Statement from Bristol, VA on the order
- **January 27th:** Email communication sent to the list of members of the public signed up through the Bristol, VA website, the BristolVALandfill.org website, or at the November 1 Open House to receive information via email
  - Email informed the public that Bristol, VA has entered a formal consent decree with the Virginia Office of the Attorney General and the Virginia Department of Environmental Quality
  - Links were provided where recipients could view the consent decree and submit public comments

- Email also included an update on construction of the Sidewall Odor Mitigation System
- Links included to a news article about why the landfill smells (Cardinal News) and to an article about Bristol, VA City Council approving $24 million for work related to the landfill

Abingdon, VA 24210

Subject: Weekly Surface Emissions Monitoring Event – January 5, 2023
Bristol Integrated Solid Waste Facility – Bristol, Virginia

Dear Mr. Chapman:

On behalf of the City of Bristol (City), SCS Engineers (SCS), is pleased to submit the results of the Weekly Surface Emissions Monitoring event performed at the Bristol Integrated Solid Waste Facility located in Bristol, Virginia on January 5, 2023. This Weekly Surface Emissions Monitoring (SEM) Event was performed in accordance with Section 3.5 of the Plan of Action in Response to the Expert Panel Report, submitted to VDEQ on July 6, 2022.

The monitoring generally conforms to the requirements of 40 CFR 63.1960(c) and (d), and 40 CFR 60.36f(c) and (d), and 40 CFR 60, Appendix A, Method 21. The landfill gas (LFG) collection system is required to operate such that the methane concentration is less than 500 ppm above background at the landfill surface.

The monitoring route includes the entire waste footprint of the Permit No. 588 landfill. Sampling was conducted with a Thermo Scientific TVA-2020 Flame Ionization Detector (FID) at 30-meter intervals and where visual observations indicated the potential for elevated concentrations of LFG, such as distressed vegetation and surface cover cracks. In addition, in accordance with 40 CFR 63.1958(d)(ii)(2) and 40 CFR 60.34f(d), monitoring was conducted at all surface cover penetrations within the waste footprint, including at the newly installed temperature probes. The approximate monitoring route and sampling locations are presented in the attached Drawing.

At the time of monitoring, all areas of the Permit No. 588 landfill footprint are subject to regulatory monitoring based on the regulatory time schedule stipulated in 40 CFR 63.1960(b) and 40 CFR 60.36f(b). The Permit 588 Landfill has a surface area of approximately 17.3 acres. Therefore, the minimum number of sampling points to cover the appropriate portion of the landfill footprint, utilizing a 30-meter grid interval, is approximately 82 (4.75 points per acre). A summary of the results of the surface emissions monitory is provided in Table 1.

Table 1. Summary of Surface Emissions Monitoring

Description	Quantity
Number of Points Sampled	149
Number of Points in Serpentine Route	100
Number of Points at Surface Cover Penetrations	49
Number of Exceedances[1]	0
Number of Serpentine Exceedances	0
Number of Pipe Penetration Exceedances	0

In accordance with the Plan of Action in Response to the Expert Panel Report, if no exceedances are detected during four consecutive monitoring events, monitoring frequency can be reduced from weekly to monthly. Therefore, since the January 5, 2023 weekly event was the first consecutive event with no exceedances, if the next three events also exhibit no exceedances, then the City may request the Department allow monitoring to be reduced to a monthly basis. However, at this time, monitoring will continue on a weekly basis.

Remonitoring of Ongoing Exceedances

In accordance with 40 CFR 63.1960(c)(4)(ii) and 40 CFR 60.36f(c)(4)(ii), corrective actions and a remonitoring event are to be performed within 10 days of the initial exceedance. In accordance with 40 CFR 63.1960(c)(4)(iii) and 40 CFR 60.36f(c)(4)(iii) additional corrective actions and a second 10-day retest are to be performed if the initial 10-day retest indicates methane values greater than the regulatory threshold. The Facility performed corrective actions including wellhead vacuum adjustments, the installation of well-bore seal, and addition of soil cover prior to this event at locations that previously exhibited elevated methane concentrations.

In accordance with 40 CFR 63.1960(c)(4)(v) and 40 CFR 60.36f(c)(4)(v) a new well or collection device must be installed or an alternate remedy must be submitted within 120-days at locations that continue to exhibit methane concentrations above the regulatory threshold for two consecutive re-tests.

A summary of ongoing exceedance points is provided in Table 2.

1 Exceedance locations were marked in the field with red flagging and were identified to landfill personnel to initiate corrective actions.

Table 2. Ongoing Weekly SEM Exceedances

Point ID	Initial Exceedance Date	1/5/23 Event	1/5/23 Event Result	Comments

Subject: Weekly Surface Emissions Monitoring Event – January 11, 2023
Bristol Integrated Solid Waste Facility – Bristol, Virginia

Dear Mr. Chapman:

On behalf of the City of Bristol (City), SCS Engineers (SCS), is pleased to submit the results of the Weekly Surface Emissions Monitoring event performed at the Bristol Integrated Solid Waste Facility located in Bristol, Virginia on January 11, 2023. This Weekly Surface Emissions Monitoring (SEM) Event was performed in accordance with Section 3.5 of the Plan of Action in Response to the Expert Panel Report, submitted to VDEQ on July 6, 2022.

The monitoring generally conforms to the requirements of 40 CFR 63.1960(c) and (d), and 40 CFR 60.36f(c) and (d), and 40 CFR 60, Appendix A, Method 21. The landfill gas (LFG) collection system is required to operate such that the methane concentration is less than 500 ppm above background at the landfill surface.

The monitoring route includes the entire waste footprint of the Permit No. 588 landfill. Sampling was conducted with a Thermo Scientific TVA-2020 Flame Ionization Detector (FID) at 30-meter intervals and where visual observations indicated the potential for elevated concentrations of LFG, such as distressed vegetation and surface cover cracks. In addition, in accordance with 40 CFR 63.1958(d)(ii)(2) and 40 CFR 60.34f(d), monitoring was conducted at all surface cover penetrations within the waste footprint, including at the newly installed temperature probes. The approximate monitoring route and sampling locations are presented in the attached Drawing.

At the time of monitoring, all areas of the Permit No. 588 landfill footprint are subject to regulatory monitoring based on the regulatory time schedule stipulated in 40 CFR 63.1960(b) and 40 CFR 60.36f(b). The Permit 588 Landfill has a surface area of approximately 17.3 acres. Therefore, the minimum number of sampling points to cover the appropriate portion of the landfill footprint, utilizing a 30-meter grid interval, is approximately 82 (4.75 points per acre). A summary of the results of the surface emissions monitory is provided in Table 1.

Table 1. Summary of Surface Emissions Monitoring

Description	Quantity
Number of Points Sampled	149
Number of Points in Serpentine Route	100
Number of Points at Surface Cover Penetrations	49
Number of Exceedances[1]	0
Number of Serpentine Exceedances	0
Number of Pipe Penetration Exceedances	0

In accordance with the Plan of Action in Response to the Expert Panel Report, if no exceedances are detected during four consecutive monitoring events, monitoring frequency can be reduced from weekly to monthly. Therefore, since the January 11, 2023 weekly event was the second consecutive event with no exceedances, if the next two events also exhibit no exceedances, then the City may request the Department allow monitoring to be reduced to a monthly basis. However, at this time, monitoring will continue on a weekly basis.

Remonitoring of Ongoing Exceedances

In accordance with 40 CFR 63.1960(c)(4)(ii) and 40 CFR 60.36f(c)(4)(ii), corrective actions and a remonitoring event are to be performed within 10 days of the initial exceedance. In accordance with 40 CFR 63.1960(c)(4)(iii) and 40 CFR 60.36f(c)(4)(iii) additional corrective actions and a second 10-day retest are to be performed if the initial 10-day retest indicates methane values greater than the regulatory threshold. The Facility performed corrective actions including wellhead vacuum adjustments, the installation of well-bore seal, and addition of soil cover prior to this event at locations that previously exhibited elevated methane concentrations.

In accordance with 40 CFR 63.1960(c)(4)(v) and 40 CFR 60.36f(c)(4)(v) a new well or collection device must be installed or an alternate remedy must be submitted within 120-days at locations that continue to exhibit methane concentrations above the regulatory threshold for two consecutive re-tests.

A summary of ongoing exceedance points is provided in Table 2.

1 Exceedance locations were marked in the field with red flagging and were identified to landfill personnel to initiate corrective actions.

Table 2. Ongoing Weekly SEM Exceedances

Point ID	Initial Exceedance Date	1/11/23 Event	1/11/23 Event Result	Comments

Subject: Weekly Surface Emissions Monitoring Event – January 25, 2023
Bristol Integrated Solid Waste Facility – Bristol, Virginia

Dear Mr. Chapman:

On behalf of the City of Bristol (City), SCS Engineers (SCS), is pleased to submit the results of the Weekly Surface Emissions Monitoring event performed at the Bristol Integrated Solid Waste Facility located in Bristol, Virginia on January 19, 2023. This Weekly Surface Emissions Monitoring (SEM) Event was performed in accordance with Section 3.5 of the Plan of Action in Response to the Expert Panel Report, submitted to VDEQ on July 6, 2022.

The monitoring generally conforms to the requirements of 40 CFR 63.1960(c) and (d), and 40 CFR 60.36f(c) and (d), and 40 CFR 60, Appendix A, Method 21. The landfill gas (LFG) collection system is required to operate such that the methane concentration is less than 500 ppm above background at the landfill surface.

The monitoring route includes the entire waste footprint of the Permit No. 588 landfill. Sampling was conducted with a Thermo Scientific TVA-2020 Flame Ionization Detector (FID) at 30-meter intervals and where visual observations indicated the potential for elevated concentrations of LFG, such as distressed vegetation and surface cover cracks. In addition, in accordance with 40 CFR 63.1958(d)(ii)(2) and 40 CFR 60.34f(d), monitoring was conducted at all surface cover penetrations within the waste footprint, including at the newly installed temperature probes. The approximate monitoring route and sampling locations are presented in the attached Drawing.

At the time of monitoring, all areas of the Permit No. 588 landfill footprint are subject to regulatory monitoring based on the regulatory time schedule stipulated in 40 CFR 63.1960(b) and 40 CFR 60.36f(b). The Permit 588 Landfill has a surface area of approximately 17.3 acres. Therefore, the minimum number of sampling points to cover the appropriate portion of the landfill footprint, utilizing a 30-meter grid interval, is approximately 82 (4.75 points per acre). A summary of the results of the surface emissions monitory is provided in Table 1.

Table 1. Summary of Surface Emissions Monitoring

Description	Quantity
Number of Points Sampled	149
Number of Points in Serpentine Route	100
Number of Points at Surface Cover Penetrations	49
Number of Exceedances[1]	0
Number of Serpentine Exceedances	0
Number of Pipe Penetration Exceedances	0

In accordance with the Plan of Action in Response to the Expert Panel Report, if no exceedances are detected during four consecutive monitoring events, monitoring frequency can be reduced from weekly to monthly. Therefore, since the January 19, 2023 weekly event was the third consecutive event with no exceedances, if the next event also exhibits no exceedances, then the City may request the Department allow monitoring to be reduced to a monthly basis. However, at this time, monitoring will continue on a weekly basis.

Remonitoring of Ongoing Exceedances

In accordance with 40 CFR 63.1960(c)(4)(ii) and 40 CFR 60.36f(c)(4)(ii), corrective actions and a remonitoring event are to be performed within 10 days of the initial exceedance. In accordance with 40 CFR 63.1960(c)(4)(iii) and 40 CFR 60.36f(c)(4)(iii) additional corrective actions and a second 10-day retest are to be performed if the initial 10-day retest indicates methane values greater than the regulatory threshold. The Facility performs corrective actions, as necessary, including wellhead vacuum adjustments, the installation of well-bore seals, and addition of soil cover prior to weekly monitoring events at locations that previously exhibited elevated methane concentrations.

In accordance with 40 CFR 63.1960(c)(4)(v) and 40 CFR 60.36f(c)(4)(v) a new well or collection device must be installed or an alternate remedy must be submitted within 120-days at locations that continue to exhibit methane concentrations above the regulatory threshold for two consecutive re-tests.

A summary of ongoing exceedance points is provided in Table 2.

1 Exceedance locations were marked in the field with red flagging and were identified to landfill personnel to initiate corrective actions.

Table 2. Ongoing Weekly SEM Exceedances

Subject: Weekly Surface Emissions Monitoring Event – January 26, 2023
Bristol Integrated Solid Waste Facility – Bristol, Virginia

Dear Mr. Chapman:

On behalf of the City of Bristol (City), SCS Engineers (SCS), is pleased to submit the results of the Weekly Surface Emissions Monitoring event performed at the Bristol Integrated Solid Waste Facility located in Bristol, Virginia on January 26, 2023. This Weekly Surface Emissions Monitoring (SEM) Event was performed in accordance with Section 3.5 of the Plan of Action in Response to the Expert Panel Report, submitted to VDEQ on July 6, 2022.

The monitoring generally conforms to the requirements of 40 CFR 63.1960(c) and (d), and 40 CFR 60.36f(c) and (d), and 40 CFR 60, Appendix A, Method 21. The landfill gas (LFG) collection system is required to operate such that the methane concentration is less than 500 ppm above background at the landfill surface.

The monitoring route includes the entire waste footprint of the Permit No. 588 landfill. Sampling was conducted with a Thermo Scientific TVA-2020 Flame Ionization Detector (FID) at 30-meter intervals and where visual observations indicated the potential for elevated concentrations of LFG, such as distressed vegetation and surface cover cracks. In addition, in accordance with 40 CFR 63.1958(d)(ii)(2) and 40 CFR 60.34f(d), monitoring was conducted at all surface cover penetrations within the waste footprint, including at the newly installed temperature probes. The approximate monitoring route and sampling locations are presented in the attached Drawing.

At the time of monitoring, all areas of the Permit No. 588 landfill footprint are subject to regulatory monitoring based on the regulatory time schedule stipulated in 40 CFR 63.1960(b) and 40 CFR 60.36f(b). The Permit 588 Landfill has a surface area of approximately 17.3 acres. Therefore, the minimum number of sampling points to cover the appropriate portion of the landfill footprint, utilizing a 30-meter grid interval, is approximately 82 (4.75 points per acre). A summary of the results of the surface emissions monitory is provided in Table 1.

Table 1. Summary of Surface Emissions Monitoring

Description	Quantity
Number of Points Sampled	149
Number of Points in Serpentine Route	100
Number of Points at Surface Cover Penetrations	49
Number of Exceedances[1]	1
Number of Serpentine Exceedances	0
Number of Pipe Penetration Exceedances	1

Proposed corrective actions at the one location with a methane exceedance, the pipe penetration of well 53, involved reconnecting the exceedance well to vacuum. Results of corrective actions and remonitoring results will be presented in subsequent reports.

Remonitoring of Ongoing Exceedances

In accordance with 40 CFR 63.1960(c)(4)(ii) and 40 CFR 60.36f(c)(4)(ii), corrective actions and a remonitoring event are to be performed within 10 days of the initial exceedance. In accordance with 40 CFR 63.1960(c)(4)(iii) and 40 CFR 60.36f(c)(4)(iii) additional corrective actions and a second 10-day retest are to be performed if the initial 10-day retest indicates methane values greater than the regulatory threshold. The Facility performs corrective actions, as necessary, including wellhead vacuum adjustments, the installation of well-bore seals, and addition of soil cover prior to weekly monitoring events at locations that previously exhibited elevated methane concentrations.

In accordance with 40 CFR 63.1960(c)(4)(v) and 40 CFR 60.36f(c)(4)(v) a new well or collection device must be installed or an alternate remedy must be submitted within 120-days at locations that continue to exhibit methane concentrations above the regulatory threshold for two consecutive re-tests.

A summary of ongoing exceedance points is provided in Table 2.

1 Exceedance locations were marked in the field with red flagging and were identified to landfill personnel to initiate corrective actions.

Subject: Weekly Surface Emissions Monitoring Event – January 30, 2023
Bristol Integrated Solid Waste Facility – Bristol, Virginia

Dear Mr. Chapman:

On behalf of the City of Bristol (City), SCS Engineers (SCS), is pleased to submit the results of the Weekly Surface Emissions Monitoring event performed at the Bristol Integrated Solid Waste Facility located in Bristol, Virginia on January 30, 2023. This Weekly Surface Emissions Monitoring (SEM) Event was performed in accordance with Section 3.5 of the Plan of Action in Response to the Expert Panel Report, submitted to VDEQ on July 6, 2022.

The monitoring generally conforms to the requirements of 40 CFR 63.1960(c) and (d), and 40 CFR 60.36f(c) and (d), and 40 CFR 60, Appendix A, Method 21. The landfill gas (LFG) collection system is required to operate such that the methane concentration is less than 500 ppm above background at the landfill surface.

The monitoring route includes the entire waste footprint of the Permit No. 588 landfill. Sampling was conducted with a Thermo Scientific TVA-2020 Flame Ionization Detector (FID) at 30-meter intervals and where visual observations indicated the potential for elevated concentrations of LFG, such as distressed vegetation and surface cover cracks. In addition, in accordance with 40 CFR 63.1958(d)(ii)(2) and 40 CFR 60.34f(d), monitoring was conducted at all surface cover penetrations within the waste footprint, including at the newly installed temperature probes. The approximate monitoring route and sampling locations are presented in the attached Drawing.

At the time of monitoring, all areas of the Permit No. 588 landfill footprint are subject to regulatory monitoring based on the regulatory time schedule stipulated in 40 CFR 63.1960(b) and 40 CFR 60.36f(b). The Permit 588 Landfill has a surface area of approximately 17.3 acres. Therefore, the minimum number of sampling points to cover the appropriate portion of the landfill footprint, utilizing a 30-meter grid interval, is approximately 82 (4.75 points per acre). A summary of the results of the surface emissions monitory is provided in Table 1.

Table 1. Summary of Surface Emissions Monitoring

Description	Quantity
Number of Points Sampled	149
Number of Points in Serpentine Route	100
Number of Points at Surface Cover Penetrations	49
Number of Exceedances[1]	0
Number of Serpentine Exceedances	0
Number of Pipe Penetration Exceedances	0

Remonitoring of Ongoing Exceedances

In accordance with 40 CFR 63.1960(c)(4)(ii) and 40 CFR 60.36f(c)(4)(ii), corrective actions and a remonitoring event are to be performed within 10 days of the initial exceedance. In accordance with 40 CFR 63.1960(c)(4)(iii) and 40 CFR 60.36f(c)(4)(iii) additional corrective actions and a second 10-day retest are to be performed if the initial 10-day retest indicates methane values greater than the regulatory threshold. The Facility performs corrective actions, as necessary, including wellhead vacuum adjustments, the installation of well-bore seals, and addition of soil cover prior to weekly monitoring events at locations that previously exhibited elevated methane concentrations.

In accordance with 40 CFR 63.1960(c)(4)(v) and 40 CFR 60.36f(c)(4)(v) a new well or collection device must be installed or an alternate remedy must be submitted within 120-days at locations that continue to exhibit methane concentrations above the regulatory threshold for two consecutive re-tests.

A summary of ongoing exceedance points is provided in Table 2.

Table 2. Ongoing Weekly SEM Exceedances

Point ID	Initial Exceedance Date	1/30/23 Event	1/30/23 Event Result	Comments
EW-53	1/26/23	10-Day Retest	Pass	Requires 30-Day Retest

SCS-FS January Summary Report

February 7, 2023
Job No. 07220028.00

Mr. Michael Martin
City of Bristol
2125 Shakesville Road
Bristol, VA 24201

Subject: Summary of Operation, Monitoring, and Maintenance (OM&M) Services
Permit Area 588 Gas Collection Control System (GCCS)
City of Bristol Integrated Solid Waste Management Facility, Bristol, Virginia
January 2023

Dear Mr. Martin:

SCS Field Services (SCS-FS) visited the Bristol Integrated Solid Waste Management Facility (ISWMF) during the month of January, 2023, for routine and non-routine monitoring and maintenance on the Solid Waste Permit (SWP) #588 gas collection and control system (GCCS). This report summarizes the work performed and presents the data collected. The monitoring data is presented in the following attachments:

Attachment 1. SWP #588 Wellfield Monitoring Data
Attachment 2. Exceedance Detail Report
Attachment 3. Enhanced Monitoring Record Form and Analytical Results
Attachment 4. Daily Logs

The tables in Attachment 1 include the January blower/flare station (BFS) monitoring data and the last three months of monitoring data for the wellheads and the leachate cleanouts.

GCCS SITE ACTIVITES

On January 5, SCS-FS performed routine wellfield monitoring and non-routine maintenance. SCS-FS monitored the BFS and the extraction wells (EW) in SWP #588. SCS-FS also replaced the wellhead temperature monitoring probes in EW-51 and -68 with longer probes and placed additional soil cover around the wellheads.

On January 6, SCS-FS conducted non-routine enhanced monitoring and carbon monoxide (CO) sampling (enhanced monitoring) for compliance with the National Emission Standards for Hazardous Air Pollutants (NESHAP) at EW-37, -57, and -64. Samples for CO and fixed gases analysis were collected and submitted to Enthalpy Analytical for analysis. Analytical results are included in Attachment 3. SCS-FS also monitored the leachate cleanouts on the north and south side of SWP #588.

On January 12, SCS-FS conducted enhanced monitoring at EW-37, -57, and -64. Samples for CO and fixed gases analysis were collected and submitted to Enthalpy Analytical for analysis. No sample was collected at EW-64, as it was below the regulatory limit of 145 degrees Fahrenheit. The laboratory reported that the sample volume for EW-57 was insufficient to complete the analysis.

On January 17-19, SCS-FS fabricated pipe stands for headerline supports and lowered the casing on EW-46.

On January 18, SCS-FS conducted enhanced monitoring at EW-37 and -57. A samples for CO and fixed gases analysis was collected at EW-37 and submitted to Enthalpy Analytical for analysis. No sample was collected at EW-57 due to liquid in the sample ports. The Ingenco plant and flare were operating. A sample could not be collected from EW-57 due to liquid at the sampling port.

On January 25, SCS-FS conducted enhanced monitoring and CO sampling at EW-37 and -57. Samples for CO and fixed gases analysis were collected and submitted to Enthalpy Analytical for analysis.

Please contact either of the undersigned if you have any questions or need additional information regarding this report.

Very truly yours,

Austin Wubbe
Project Coordinator

Enhanced Monitoring Record Forms and Analytical Results

ENHANCED MONITORING RECORD FORM

- FORM TO BE COMPLETED IF ANY WELLHEAD TEMPERATURES OVER 145F THAT CANNOT BE CORRECTED IN 7 DAYS
- WEEKLY MONITORING MUST BEGIN WITHIN 7 DAYS OF EXCEEDANCE FOR CO AND VISUAL OBSERVATIONS
- TEMPERATURES AT OR ABOVE 165F REQUIRE ANNUAL DOWNHOLE TEMPERATURE MONITORING (10FT INTERVALS)
- TEMPERATURES AT OR ABOVE 170F REQUIRE 24-HOUR PADEP NOTIFICATION; IMMEDIATELY CONTACT ENGINEERS IN THIS CASE

Landfill Name: Bristol **Technician: Ryan Seymour**

Well ID	Date & Time	GEM Reading			If Temp >145F					If Temp ≥165F	If Temp ≥170F	Comments

	4330 Lewis Road, Suite 1	Date Issued:	January 16, 2023 16:12
	Harrisburg, PA 17111	Project Number:	07220028.00
Submitted To:	Tom Lock	Purchase Order:	07-SO04485
Client Site I.D.:	Bristol		

Enclosed are the results of analyses for samples received by the laboratory on 01/09/2023 10:30. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

Ted Soyars

Technical Director

End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

RPD	Relative Percent Difference
Qual	Qualifers
-RE	Denotes sample was re-analyzed
PF	Preparation Factor
MDL	Method Detection Limit
LOQ	Limit of Quantitation
ppbv	parts per billion by volume

TIC — Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.

All EPA method 3C results are reported as normalized values when the sum total of all evaluated constituents is outside ± 10% of the absolute.

Sample Conditions Checklist

Samples Received at:	**20.40°C**
How were samples received?	FedEx Ground
Were Custody Seals used? If so, were they received intact?	No
Are the custody papers filled out completely and correctly?	Yes
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	No
Are all volatile organic and TOX containers free of headspace?	NA
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	NA
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis.	Yes

Enclosed are the results of analyses for samples received by the laboratory on 01/13/2023 10:15. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

Ted Soyars

Technical Director

End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

RPD	Relative Percent Difference
Qual	Qualifers
-RE	Denotes sample was re-analyzed
PF	Preparation Factor
MDL	Method Detection Limit
LOQ	Limit of Quantitation
ppbv	parts per billion by volume

TIC — Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.

All EPA method 3C results are reported as normalized values when the sum total of all evaluated constituents is outside ± 10% of the absolute.

Sample Conditions Checklist

Samples Received at:	**20.40°C**
How were samples received?	FedEx Express
Were Custody Seals used? If so, were they received intact?	No
Are the custody papers filled out completely and correctly?	No
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	No
Are all volatile organic and TOX containers free of headspace?	NA
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	NA
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis.	Yes

Work Order Comments

Samples logged for VOC Fixed Gases by EPA 3C and ALT 145 CO per Tom Lock via email, which differs from the COC (Alt 145 CO, Hydrogen).

Enclosed are the results of analyses for samples received by the laboratory on 01/20/2023 09:25. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

Ted Soyars

Technical Director

End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

RPD	Relative Percent Difference
Qual	Qualifers
-RE	Denotes sample was re-analyzed
PF	Preparation Factor
MDL	Method Detection Limit
LOQ	Limit of Quantitation
ppbv	parts per billion by volume

TIC — Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.

All EPA method 3C results are reported as normalized values when the sum total of all evaluated constituents is outside ± 10% of the absolute.

Sample Conditions Checklist

Samples Received at:	**20.50°C**
How were samples received?	FedEx Express
Were Custody Seals used? If so, were they received intact?	No
Are the custody papers filled out completely and correctly?	Yes
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	No
Are all volatile organic and TOX containers free of headspace?	NA
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	NA
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis.	Yes

Enclosed are the results of analyses for samples received by the laboratory on 01/27/2023 11:02. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

Ted Soyars

Technical Director

End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

Qualifiers and Definitions

RPD	Relative Percent Difference
Qual	Qualifers
-RE	Denotes sample was re-analyzed
PF	Preparation Factor
MDL	Method Detection Limit
LOQ	Limit of Quantitation
ppbv	parts per billion by volume
TIC	Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.

All EPA method 3C results are reported as normalized values when the sum total of all evaluated constituents is outside ± 10% of the absolute.

Sample Conditions Checklist

Samples Received at:	**19.30°C**
How were samples received?	FedEx Ground
Were Custody Seals used? If so, were they received intact?	No
Are the custody papers filled out completely and correctly?	Yes
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	No
Are all volatile organic and TOX containers free of headspace?	NA
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	NA
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis.	Yes

5000	500399	50		20.9	34.9		

SUMMARY	Scs was on site for monthly monitoring and blower flare check.
	I calibrated my gem. I bump tested Mx4.

Enhanced monitoring at EW-37 and -57. I notified SCS Engineers that well 57 was 176 degrees. I couldn't get an accurate sample because liquid/foam in the sample ports.

I also confirmed the old phase (221) well heads need to be cleaned or replaced with new QED well heads. Parts for repairs on order.

Noted settlement around EW-55 and -64.

I didn't leave comments on my 221 readings because I wrote the comments down in my book. Etools didn't work with my comments.

Adjustments were made to the 221 during monthly monitoring. For example: GW 3, closed down a little. GW 8, closed. GW 19, installed 1 inch orifice plate, closed it.

5000	2648	49.9		20.9	34.9		

SUMMARY

SCS was on site for CO sampling and 221 line well head investigation.

Flare was burning and plant was running on arrival and departure.

Bump tested MX4s.

GEM reading at Blower inlet: 32.1% CH4, 31.6% CO2, 4.2% O2, 32.1% Bal, -24.57" vacuum, 320 SCFM

Rechecks were required on GW37 (149F) and GW57 (172F). Could not acquire a sample or an accurate reading on GW57 due to liquid in the test ports. GEM experienced flow fail and filled water trap while monitoring GW57. A CO sample was taken from GW37. Notified engineers of exceedances and requirements to acquire a sample on GW57.

GW57 pump hose fitting that connects to the drain line appears to be damaged/bent.

Performed investigation on the condition of well heads in the 221 cell. Inspected ferncos, valves, flex hoses, pitot tubes, protective cover caps, and pump attachments. More information on individual wells can be found on separate information sheet.

Used acetone to flush out debris inside pitot tube for all wellheads in the 221 line. GWs 03, 09, and 06 are missing pitot tubes.

Out of the 19 wells in the 221 cell more than 50% will require new well head set ups. Recommend repairing/replacing all 19 well heads.

SUMMARY	Scs was on site for monthly monitoring and blower flare check.
	I calibrated my gem. I bump tested Mx4.

Enhanced monitoring at EW-57 and 37. I informed Lauren that 57 was at 170 degrees.

Blower reading: CH4- 34.4% CO2- 35.2% O2- 3.5% BAL- 26.9%

Noted air leak at EW-20 due to missing a rubber cap. Parts for repair on order.

221 reading: CH4: 11.8% CO2: 8.3% O2: 15.9% BAL: 64.1%

Solid Waste Permit 588 Daily Wellhead Temperature Averages

The data provided in this report represent initial readings provided by field instrumentation without Validation, analysis, quality assurance review, or context based on operating conditions. This report is subject to revision following quality assurance review and an analysis of operating conditions. SCS will continue to provide a supplemental report with additional information and further analysis on a bi-monthly basis at a minimum.

As of the date of this report, the system is still undergoing commissioning and SCS staff is still conducting verification testing and making minor field modifications to this system. Some values reported may differ from recordings made by other field instrumentation. SCS may elect to report values gathered from other data sources (GEM, field thermometer) for regulatory purposes until commissioning is complete.

GENERAL NOTES:

1. OWNER/DEVELOPER: CITY OF BRISTOL, VIRGINIA
2. CONSULTING ENGINEER: SCS ENGINEERS, 15521 MIDLOTHIAN TURNPIKE #305, MIDLOTHIAN, VA 23113
3. LOCATION OF EXISTING SEWER, WATER, OR GAS LINES, CONDUITS, OR OTHER STRUCTURES ACROSS, UNDERNEATH, OR OTHERWISE ALONG THE LINE OF PROPOSED WORK ARE NOT NECESSARILY SHOWN ON THE PLANS, AND IF SHOWN ARE ONLY APPROXIMATELY CORRECT. CONTRACTOR SHALL VERIFY LOCATION AND ELEVATION OF UNDERGROUND UTILITIES SHOWN ON THE PLANS IN AREAS OF CONSTRUCTION PRIOR TO STARTING WORK. CONTACT ENGINEER IMMEDIATELY IF LOCATION OF ELEVATION IS DIFFERENT FROM THAT SHOWN ON THE PLANS, IF THERE APPEARS TO BE A CONFLICT, OR UPON DISCOVERY OF A UTILITY NOT SHOWN ON THE PLANS. THE CONTRACTOR SHALL OBTAIN FIELD UTILITY LOCATIONS BY CALLING "MISS UTILITY" FORTY EIGHT (48) HOURS PRIOR TO WORKING IN THE VICINITY OF EXISTING UTILITIES.
4. BOUNDARY INFORMATION TAKEN FROM OTHERS.
5. THESE DRAWINGS ARE NOT SUITABLE FOR CONSTRUCTION.
6. HORIZONTAL DATA IS BASED ON US STATE PLANE NAD 1983 VIRGINIA SOUTH ZONE. VERTICAL DATA BASED ON NAVD 88.

GENERAL NOTES

1. OUTSIDE OF THE QUARRY FOOTPRINT, GRADES SHOWN AS DASHED HALF-TONE CONTOUR LINES REPRESENT THE TOPOGRAPHY DEVELOPED FROM AERIAL PHOTOGRAPHY PROVIDED BY NV5 GEOSPATIAL, DATED OCTOBER 7, 2022. WITHIN THE QUARRY, THE GRADES ARE BASED UPON AN SCS DRONE FLYOVER DATED DECEMBER 2, 2022.
2. EXISTING LFG HEADER WAS OBTAINED FROM SCS CONSTRUCTION DRAWINGS. LAST UPDATED JULY 6, 2022.
3. THE APPROXIMATE SIDEWALL LOCATION BOUNDARY LINE WAS CREATED USING THE SURVEY LIMIT BOUNDARY LINE PROVIDED BY DRAPER ADEN ASSOCIATES, DATED JUNE 8, 2020, EDITED BASED ON A REVIEW OF TOPOGRAPHIC DATA AND AERIAL IMAGERY.
4. THE LFG WELLHEADS SHOWN WITH A LARGER WELLHEAD ICON REPRESENT WELLS WHICH WERE DRILLED DURING THE MONTHS OF SEPTEMBER AND OCTOBER OF 2021, AND LATER CONNECTED IN NOVEMBER AND DECEMBER OF 2021. THESE WELLS HAVE NOT YET BEEN SURVEYED FOLLOWING THEIR INSTALLATION AND THEREFORE THE LOCATIONS SHOWN ARE BASED ON THE EXPANSION DESIGN DRAWINGS DATED AUGUST 13, 2021
5. THE LOCATIONS OF THE EXISTING GAS PROBES AND EXISTING MANHOLES SHOWN ARE APPROXIMATE BASED ON DATA PROVIDED BY DRAPER ADEN ASSOCIATES. THE EXACT LOCATIONS OF THESE EXISTING WELLFIELD COMPONENTS MAY NEED IN-FIELD VERIFICATION.
6. THE LOCATIONS OF WELLS GW-16, GW-17, GW-19, GW-20, AND GW-21 WERE MEASURED USING MAPPING GRADE POSITIONING EQUIPMENT UTILIZING GEOGRAPHIC INFORMATION SYSTEM SOFTWARE.

GENERAL NOTES

1. WITHIN THE QUARRY FOOTPRINT, THE HALF-TONE CONTOURS REPRESENT AN APPROXIMATION OF ANTICIPATED FUTURE CONDITIONS FOLLOWING THE INSTALLATION OF THE SIDEWALL ODOR MITIGATION SYSTEM. THE FULL-TONE CONTOURS SHOW THE PROPOSED EVOH COVER SYSTEM INSTALLATION GRADE.
2. SCS PLANS TO EXPAND THE LANDFILL GAS SYSTEM TO INCORPORATE THE LFG COLLECTION STRIPS. SCS PLANS TO APPLY VACUUM PRESSURE TO THE VERTICAL COLLECTION PIPES NEAR THE TOP OF THE COLLECTION STRIPS.
3. EXISTING LFG HEADER WAS OBTAINED FROM SCS CONSTRUCTION DRAWINGS, LAST UPDATED JULY 6, 2022.
4. THE APPROXIMATE SIDEWALL LOCATION BOUNDARY LINE WAS CREATED USING THE SURVEY LIMIT BOUNDARY LINE PROVIDED BY DRAPER ADEN ASSOCIATES, DATED JUNE 8, 2020, EDITED BASED ON A REVIEW OF TOPOGRAPHIC DATA AND AERIAL IMAGERY.
5. THE LFG WELLHEADS SHOWN WITH A LARGER WELLHEAD ICON REPRESENT WELLS WHICH WERE DRILLED DURING THE MONTHS OF SEPTEMBER AND OCTOBER OF 2021, AND LATER CONNECTED IN NOVEMBER AND DECEMBER OF 2021. THESE WELLS HAVE NOT YET BEEN SURVEYED FOLLOWING THEIR INSTALLATION AND THEREFORE THE LOCATIONS SHOWN ARE BASED ON THE EXPANSION DESIGN DRAWINGS DATED AUGUST 13, 2021.
6. THE LOCATIONS OF THE EXISTING GAS PROBES AND EXISTING MANHOLES SHOWN ARE APPROXIMATE BASED ON DATA PROVIDED BY DRAPER ADEN ASSOCIATES. THE EXACT LOCATIONS OF THESE EXISTING WELLFIELD COMPONENTS MAY NEED IN-FIELD VERIFICATION.

GENERAL NOTES

1. THE APPROXIMATE THREE DIMENSIONAL SURFACE AREA OF THE EVOH COVER SYSTEM IS 19.0 ACRES.
2. WITHIN THE QUARRY FOOTPRINT, THE GRADES SHOWN REPRESENT THE PROPOSED INSTALLATION GRADE FOR THE EVOH COVER SYSTEM.
3. EXISTING LFG HEADER WAS OBTAINED FROM SCS CONSTRUCTION DRAWINGS, LAST UPDATED JULY 6, 2022.
4. THE APPROXIMATE SIDEWALL LOCATION BOUNDARY LINE WAS CREATED USING THE SURVEY LIMIT BOUNDARY LINE PROVIDED BY DRAPER ADEN ASSOCIATES, DATED JUNE 8, 2020, EDITED BASED ON A REVIEW OF TOPOGRAPHIC DATA AND AERIAL IMAGERY.
5. THE LFG WELLHEADS SHOWN WITH A LARGER WELLHEAD ICON REPRESENT WELLS WHICH WERE DRILLED DURING THE MONTHS OF SEPTEMBER AND OCTOBER OF 2021, AND LATER CONNECTED IN NOVEMBER AND DECEMBER OF 2021. THESE WELLS HAVE NOT YET BEEN SURVEYED FOLLOWING THEIR INSTALLATION AND THEREFORE THE LOCATIONS SHOWN ARE BASED ON THE EXPANSION DESIGN DRAWINGS DATED AUGUST 13, 2021.
6. THE LOCATIONS OF THE EXISTING GAS PROBES AND EXISTING MANHOLES SHOWN ARE APPROXIMATE BASED ON DATA PROVIDED BY DRAPER ADEN ASSOCIATES. THE EXACT LOCATIONS OF THESE EXISTING WELLFIELD COMPONENTS MAY NEED IN-FIELD VERIFICATION.
7. THE LOCATIONS OF WELLS GW-16, GW-17, GW-19, GW-20, AND GW-21 WERE MEASURED USING MAPPING GRADE POSITIONING EQUIPMENT UTILIZING GEOGRAPHIC INFORMATION SYSTEM SOFTWARE.

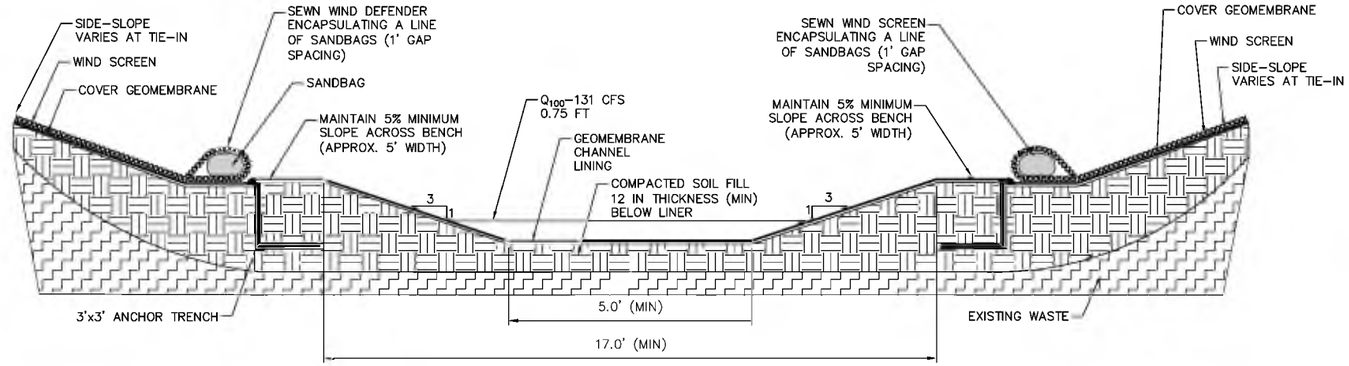
1 6 7 INTERIM EVOH COVER
NOT TO SCALE

NOTES:

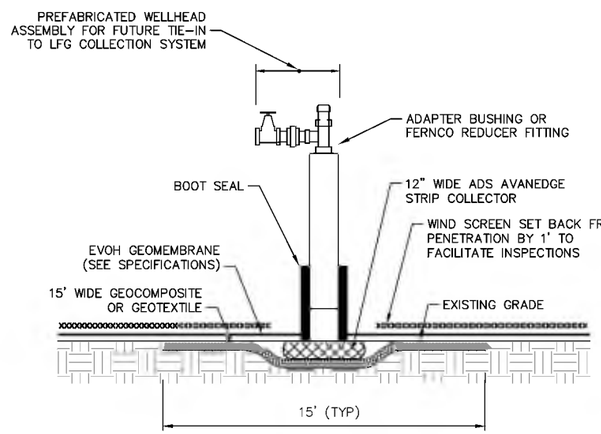
1 THE OWNER MAY OR MAY NOT ELECT TO INCLUDE A GEOTEXTILE WIND SCREEN



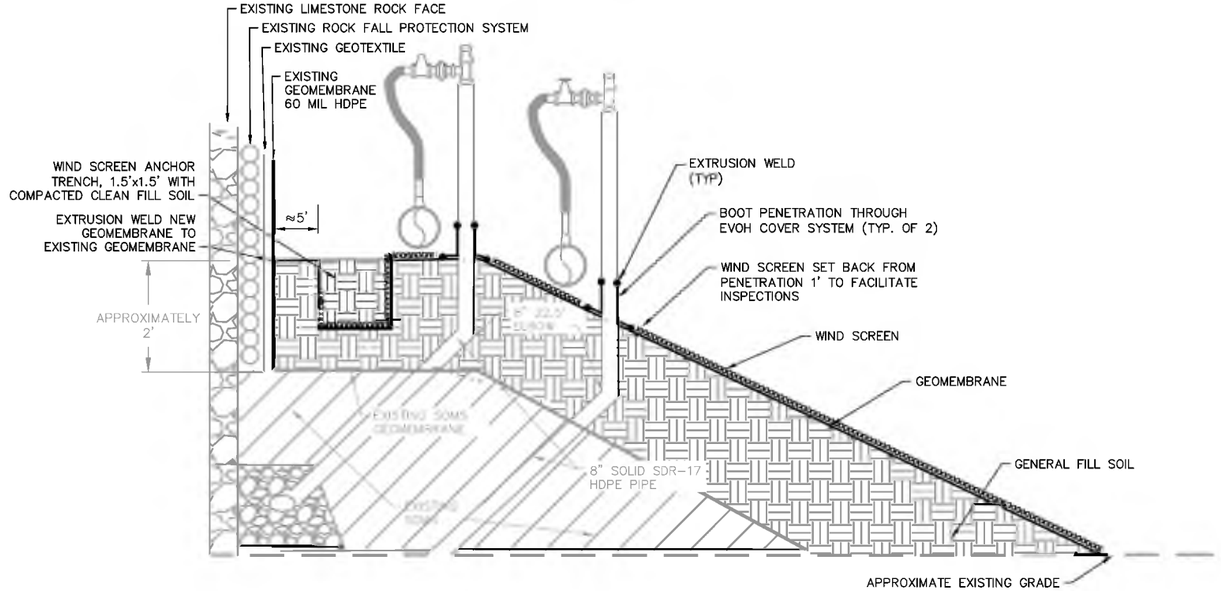
2 5 7 STORMWATER CHANNEL PRELIMINARY DESIGN
NOT TO SCALE

NOTES:

1. CHANNEL SLOPE IS APPROXIMATELY 5%. THE 100-YR FLOW DEPTH IS APPROX. 0.75 FT.



3 5 7 LFG COLLECTION STRIPS
NOT TO SCALE



4 6 7 EVOH COVER SYSTEM TIE-IN TO EXISTING SIDEWALL LINER
NOT TO SCALE

NOTE:
1 THESE DETAILS HAVE BEEN DEVELOPED IN CONJUNCTION WITH PLANNING EFFORTS AND DEPICT CONCEPTUAL DESIGN INFORMATION. THE ACTUAL DESIGN AND MATERIAL MAY BE MODIFIED TO ACCOMMODATE FIELD CONDITIONS OR ADJUSTED BASED ON ADDITIONAL DATA OR COST IMPLICATIONS DURING ENGINEERING DESIGN ACTIVITIES AND CONSTRUCTION.
2. THE OWNER MAY OR MAY NOT ELECT TO INCLUDE A GEOTEXTILE WIND SCREEN. THE DETAILS CURRENTLY ASSUME THE USE OF A GEOTEXTILE WIND SCREEN.
3. INTERIM COVER WILL BE UTILIZED OVER THE EXTENT OF THE LANDFILL IN THE NEAR TERM. IN THE EVENT THE DECISION IS MADE TO PERMANENTLY CLOSE THE LANDFILL, THE LANDFILL WILL RECEIVE FINAL COVER.

Final Report

Laboratory Order ID 22L1241

Client Name:	SCS Engineers-Winchester 296 Victory Road Winchester, VA 22602	Date Received:	December 23, 2022 8:00
		Date Issued:	January 27, 2023 16:49
		Project Number:	02218208.15 Task 1
Submitted To:	Jennifer Robb	Purchase Order:	
Client Site I.D.:	City of Bristol Landfills		

Enclosed are the results of analyses for samples received by the laboratory on 12/23/2022 08:00. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

Ted Soyars
Technical Director

End Notes:
The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

Qualifiers and Definitions

DS	Surrogate concentration reflects a dilution factor.
J	The reported result is an estimated value.
L	LCS recovery is outside of established acceptance limits
M	Matrix spike recovery is outside established acceptance limits
P	Duplicate analysis does not meet the acceptance criteria for precision
RPD	Relative Percent Difference
Qual	Qualifers
-RE	Denotes sample was re-analyzed
LOD	Limit of Detection
BLOD	Below Limit of Detection
LOQ	Limit of Quantitation
DF	Dilution Factor
TIC	Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.
PCBs, Total	Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1254, 1260, 1262, and 1268.

Sample Conditions Checklist

Samples Received at:	**5.40°C**
How were samples received?	Logistics Courier
Were Custody Seals used? If so, were they received intact?	Yes
Are the custody papers filled out completely and correctly?	No
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	Yes
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis.	No

The COC indicated the sample matrix for samples as Wastewater. However, the analysis requested are for the Groundwater method. The sample matrix has been logged as Non-potable water. Sample -01B:EW-50 was received with a pH of 7 and sample -01F:EW-50 was received with a pH of 6 and H2SO4 was added to both to

ACCREDITED
CERT # 6429.01

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with Pace Gulf Coast's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	Organics - The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
L	Reporting Limits adjusted to meet risk-based limit.
P	RPD between primary and confirmation result is greater than 40
DL	Diluted analysis – when appended to Client Sample ID

Sample receipt at Pace Gulf Coast is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of Pace Gulf Coast. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Case Narrative

Client: Enthalpy Analytical **Report:** 222122834

Pace Analytical Gulf Coast received and analyzed the sample(s) listed on the Report Sample Summary page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

GENERAL CHEMISTRY

In method AM23G, sample was run outside of recognized holding time.

DRAFT REPORT

Laboratory Order ID 23A0880

Client Name:	SCS Engineers-Winchester 296 Victory Road Winchester, VA 22602	Date Received:	January 19, 2023 8:00
		Date Issued:	February 3, 2023 11:50
		Project Number:	0221820.15 Task 1
Submitted To:	Jennifer Robb	Purchase Order:	
Client Site I.D.:	City of Bristol Landfill		

Enclosed are the results of analyses for samples received by the laboratory on 01/19/2023 08:00. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

End Notes:
The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

Note that this report is not the "Certificate of Analysis". This report only lists the target analytes that displayed concentrations that exceeded the detection limit specified for that analyte. For a complete listing of all analytes requested and the results of the analysis see the " Certificate of Analysis".

ANALYTICAL REPORT FOR SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
EW-50	23A0880-01	Ground Water	01/17/2023 12:30	01/19/2023 08:00
EW-58	23A0880-02	Ground Water	01/17/2023 12:55	01/19/2023 08:00
EW-65	23A0880-03	Ground Water	01/18/2023 08:00	01/19/2023 08:00
EW-59	23A0880-04	Ground Water	01/18/2023 08:25	01/19/2023 08:00
Trip Blank	23A0880-05	Ground Water	01/09/2023 14:30	01/19/2023 08:00

Due to matrix interference, Nitrite for sample 23A0880-01 and -04 had reporting limits twice what the EPA MCL is.

Qualifiers and Definitions

DS	Surrogate concentration reflects a dilution factor.
E	Estimated concentration, outside calibration range
J	The reported result is an estimated value.
L	LCS recovery is outside of established acceptance limits
M	Matrix spike recovery is outside established acceptance limits
RPD	Relative Percent Difference
Qual	Qualifers
-RE	Denotes sample was re-analyzed
LOD	Limit of Detection
BLOD	Below Limit of Detection
LOQ	Limit of Quantitation
DF	Dilution Factor
TIC	Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.
PCBs, Total	Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1254, 1260, 1262, and 1268.

Sample Conditions Checklist

Samples Received at:	**3.00°C**
How were samples received?	Logistics Courier
Were Custody Seals used? If so, were they received intact?	Yes
Are the custody papers filled out completely and correctly?	Yes
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	No
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	Yes
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis.	No

Sample -01B and -01D:EW-50 was received with a pH of 7 and H2SO4 was added to bring the pH to <2.
Sample -02B and -01D:EW-58 was received with a pH of 7 and H2SO4 was added to bring the pH to <2.

--- = not applicable

J = Parameter was detected at a concentration greater than the laboratory's LOD, but less than the laboratory's LOQ. Concentration is considered estimated.

LOD = laboratory's Limit of Detection

LOQ = laboratory's Limit of Quantitation

mg/L = milligrams per liter

ND = Not Detected

ug/L = micrograms per liter

REMARKS:

Jonathan,
In accordance with Item 8.iii of Appendix A and Item 8 of Appendix B of the Consent Decree between the City and VDEQ, SCS is submitting the Monthly Compliance Reports for the Solid Waste Permits #588, #498, and #221 on behalf of the City of Bristol, Virginia. The reports can be downloaded using the links below. Please note that the data from monthly gas monitoring of leachate collection components (Item 1.i of Appendix A), sampling and analysis of dual extraction wells (Item 4.ii of Appendix A), and topographic survey (Item 5.ii of Appendix A) are contained within the Solid Waste Permit #588 report. Let us know if you have questions about the contents of these reports.
Regards,
Charles
